© 2008 Efecitis Nederland BV: a TNO company

This report is issued by the TNO company Efecitis Nederland BV (previously TNO Centre for Fire Research).
TNO decided, in response to international developments and requests by customers, to collaborate with two
European Egolf partners, both highly experienced in fire safety: the Norwegian Sintef/NBL and the French
CTICM. Thus, through scaling up, a more comprehensive service of high quality and a wider range of facilities
can be offered. In order to achieve this, the fire safety related activities of the partners involved have been
privatised in this collaboration. With respect to TNO this has led to the privatisation on the 1st of July 2006 of the
activities of the TNO Centre for Fire Research via the establishment of the company Efecitis Nederland BV.
Product identification:
Sonaspray K 13 st - sp - FC - FCX, further referred to as 'the product'.

Abstract:
Twelve specimens of the product were subjected to direct impingement of a small flame according to EN ISO 11925-2:2002.

Intended application:
The product will be used as a wall, facade or ceiling covering.

Manufacturer/importer:
Asona Benelux BV
P.O. Box 9057
NL-1180 MB AMSTELVEEN
The Netherlands

Product description:
According to the sponsor the product is composed of:
- Cellulose from recycled paper with an addition of Borax salts, to provide the product with fire resistant properties.
- The Sonaspray is applied by spraying with a mix of 80% water and 20% adhesive.
  The adhesive is a copolymer with a small addition of Poly Vinyl Alcohol.
- The thickness of the sprayed layer is approx. 20 mm, with a surface density of 2.75 kg/m².

Samples:
Sampling procedure: The samples were prepared and sent in by the sponsor.
Age: At the time of receipt: approx. 6 weeks.
At the start of the examinations: 2 weeks.
Date of receipt: April 8, 2008

Specimen preparation:
Substrates used: Paper faced plasterboard, thickness 12 mm
Method of fixing: Spraying
Conditioning: Prior to the examinations, the specimens were conditioned over a period of 2 weeks at a temperature of (23 ± 2) °C and a relative humidity of (50 ± 5) %, according to § 4.1 of EN 13238:2001.

Examination:
Number of tests: A total of twelve single ignitability tests were carried out according to EN 11925-2:2002
Deviations from the test method: None
Harmonised Product Standard: At the time of examination of the product, the sponsor was not aware of a related existing Harmonised Product Standard.

The results are given in Table 1.
Date of examination:
April 25, 2008

</tbody>
</table>

Classification parameters: **150 mm not reached within 60 s**

Observations of physical behaviour of the test specimen:
The material did not shrink and melt away from the flame without ignition. Applying the testing protocol as specified in Annex A of the standard was therefore not necessary.

Conclusions:
A formal classification is to be assessed in accordance with EN 13501-1, “Fire classification of construction products and building elements – Part 1: Classification using data from reaction to fire tests”.

Remarks:
The test results relate to the behaviour of the test specimens of a product under the particular conditions of the test; they are not intended to be the sole criterion for assessing the potential fire hazard of the product in use.

Regarding the precision of the test method, following Annex B of EN 11925-2 the absolute repeatability/reproducibility for this test method is estimated to lie within 3 s to 5 s for all times measured.

Issue number 1

Date of issue April 2008

Project number 2008718

This classification report consists of four pages and may only be used in its entirety.

This report is issued by the TNO company Effectis Nederland BV (previously TNO Centre for Fire Research). TNO decided, in response to international developments and requests by customers, to collaborate with two European Egolf partners, both highly experienced in fire safety: the Norwegian Sintef/NBL and the French CITCM. Thus, through this partnership, a more comprehensive service of high quality and a wider range of facilities can be offered. In order to achieve this, the fire safety related activities of the partners involved have been privatized in this collaboration. With respect to TNO this has led to the privatization on the 1st of July 2006 of the activities of the TNO Centre for Fire Research via the establishment of the company Effectis Nederland BV.
1. Introduction

This classification report defines the classification assigned to Sonaspray K 13 st - sp - FC - FCX in accordance with the procedures given in EN 13501-1: 2007.

2. Details of classified product

2.1 General

The product, Sonaspray K 13 st - sp - FC - FCX, is defined as a type of product according to relevant European Technical Specification (to be used for CE marking)

2.2 Product description

According to the sponsor the product is composed of:
- Cellulose from recycled paper with an addition of Borax salts, to provide the product with fire resistant properties.
- The Sonaspray is applied by spraying with a mix of 80% water and 20% adhesive. The adhesive is a copolymer with a small addition of Poly Vinyl Alcohol.
- The thickness of the sprayed layer is approx. 20 mm, with a surface density of 2.75 kg/m².

4. Classification and field of application

4.1 Reference of classification

This classification has been carried out in accordance with clause 11 (excluding floorings) of NEN-EN 13501-1:2007

4.2 Classification

The product, **Sonaspray K 13 st - sp - FC - FCX**, in relation to its reaction to fire behaviour is classified:

B

The additional classification in relation to smoke production is:

s2

The additional classification in relation to flaming droplets / particles is:

d0

**Reaction to fire classification: B-s2, d0**
4.3 Field of application

This classification is valid for the following product parameters:

- Thickness  approx. 20 mm
- Surface density  2.75 kg/m$^2$

This classification is valid for the following end use applications:

- Substrate  non-combustible (class A1/A2, according to EN 13501-1)
- Air gap  no air gap
- Methods and means of fixing  spraying
- End use condition  the product will be used as a wall, facade or ceiling covering.

4.4 Duration of the validity of this classification report

There are no limitations in time on the validity of this report. It is however strongly recommended to reconsider the content of this report after a period of maximum five years.

5. Limitations

This classification document does not represent type approval or certification of the product.

The classification assigned to the product in this report is appropriate to a declaration of conformity by the manufacturer within the context of system 3 attestation of conformity and CE marking under the Construction Products Directive.

The manufacturer has made a declaration, which is held on file. This confirms that the product's design requires no specific processes, procedures or stages (e.g. no addition of flame-retardants, limitation of organic content, or addition of fillers) that are aimed at enhancing the fire performance in order to obtain the classification achieved. As a consequence the manufacturer has concluded that system 3 attestation is appropriate.

The test laboratory has, therefore, played no part in sampling the product for the test, although it holds appropriate references, supplied by the manufacturer, to provide for traceability of the samples tested.
